

Clean Code: Meaningful Names (Summary)

1. Use Intention-Revealing Names

```
Bad:
int d;

Good:
int elapsedTimeInDays;
```

2. Avoid Disinformation

```
Bad:
accountList (not actually a list)

Good:
accounts
```

3. Make Meaningful Distinctions

```
Bad:
ProductData, ProductInfo

Good:
Product, ProductDetails
```

4. Use Pronounceable Names

```
Bad:
genymdhms

Good:
generationTimestamp
```

5. Use Searchable Names

```
Bad:
int x = 5;

Good:
int WORK_DAYS_PER_WEEK = 5;
```

6. Avoid Encoding

```
Bad:
String m_name;

Good:
String name;
```

7. Use Problem Domain Names

```
Example:
Bank system → Account, Transaction, Customer
```

8. Use Solution Domain Names

```
Example:
JobQueue, CacheManager
```

Conclusion

Good naming makes code self-explanatory. It improves readability, reduces the need for comments, and makes collaboration easier.
